[Overview of the environmental sector in Alberta, C. Robertson](#)

[A Canadian Approach to Integrated Waste Management - Edmonton's Experience, D. McCartney](#)

[Alberta Oil Sands as a Technical and Business Opportunity for Bavaria, R. Ptok](#)

6. Munich Brain Course: October 6th - October 7th, 2010

The [Munich Brain Course](#) is a yearly event held every autumn and managed by Prof. Dr. med. Adrian Danek and Dr. med. Peter Reilich. Each course has three main topics with additional presentations and hands-on dissections. In 2010, the teaching course is offered for the first time in English and German, after six years of "Intensivkurs Neuroanatomie". The regular courses aim at teaching anatomy based on their application in the neurosciences. Speakers accomplished in anatomy, pathology, physiology, neurology, neuropsychology, neurosurgery, and neuroradiology are invited to present applicable knowledge from their fields of expertise. Supervised dissections of brain specimens in small groups complete the lecture program. Further, microscopic slides and findings from macropathology are demonstrated.

7. EMINA

European Research Project on rare neurological diseases.
